

I support FCC petition RM-10352. The 1800 to 1843 kHz band segment should be reserved for CW operation only. Such a partitioning would be consistent with the segmentation which exists on the other HF amateur bands. It would protect weak-signal CW operation from interference from SSB operations which often take place below 1843 kHz. FCC regulation Part 97.307 (f) should be changed to clearly state this band plan.
